

Company Profile

ALDATA Software is no stranger to the forest industry or to information technology. In 1991, the company president – then a major logging contractor – recognized a need for a computer program to track costs and key operating data for logging operations. This led to the development of ALDATA's first product, Log Harvester. Over the last thirteen years the company has evolved, grown and developed a suite of software products that help forest companies manage their weigh scale operations and the fibre procurement and management processes.

ALDATA Software's suite of products, The Boss Line, includes weigh scale management and wood fibre management software. TAGASIS, ALDATA's on-board computer system, captures and reports essential business information about the operation of mobile equipment. Implemented either individually or as a product suite, ALDATA's proven technologies help companies improve the efficiency of woodlands accounting and operations. ALDATA's systems also provide managers with current and accurate information to guide decisions about inventory management and fibre procurement.

ALDATA Software's firsthand experience in the forest industry and as information technology consultants provides ALDATA with the skills to develop solutions that complement forest companies' business strategies. ALDATA forms partnerships with its clients to transform the information that the systems collect into business intelligence that supports operational decisions and other important business areas, such as forest certification efforts.

ALDATA Software is proud of its history in the forest industry, and the company is excited about the future. Its cornerstone products have been recently upgraded or are in the process of redevelopment. Continual investment in products provides clients with modern technology that better meets business needs. ALDATA is also developing new products that will complement the features and functions of the Boss Line systems.

ALDATA Software is an established company that provides its clients with innovative solutions to everyday business challenges.

Senior Management Team

Mike Meagher **President and CEO, Founder**

After spending 15 years as a major logging contractor, Mike recognized the forest industry's need for accurate and timely management information. He founded ALDATA Software in 1991 to develop forest-industry-specific business applications. Today, Mike uses his combination of practical forestry knowledge and systems savvy to identify new opportunities to apply technologies in improving the industry's economic and environmental bottom lines.

Bonnie Meagher **Chief Financial Officer**

With her background in banking, Bonnie has managed the business end of her joint ventures with husband Mike, including ALDATA and the logging business, for almost 30 years. Bonnie is responsible for the financial and personnel administration at ALDATA.

Chris Bell, BJ **Client Services Manager**

Chris has spent four years at ALDATA, using her knowledge of forest operations to document client business requirements and her background in project management to manage large-scale implementations. Prior to joining ALDATA, Chris spent a dozen years in the industry, working for companies such as Forintek Canada, a national wood products research organization, and Weldwood of Canada Limited. She draws on her background in public relations/marketing as a member of ALDATA's marketing board. Chris holds a Bachelor of Journalism from Carleton University in Ottawa, ON.
