ALDATA Delivers Data Communication Applications Via Satellite, Cell or Radio

The quest to develop natural resources has taken companies to some of the most remote places on earth. Accessible, reliable data transmission between the field and the office affects efficiency, safety and directly impacts the bottom line.

ALDATA designs, develops, manufactures, sells and supports a wide variety of data collection and accessibility products.

Satellite Communications – Iridium and OrbcComm Specialists.

Off the shelf solutions, custom design or semi-custom development. Bring us your remote monitoring application. If we don't have the solution, we will make one.

TAGASIS AVL – Data Acquisition, storage, RS232 compliant interface module with GPS. Suitable for stationary or mobile applications.

- Stores data from sensors for retransmission via satellite, cell or radio
- RS 232 interface
- GPS built in
- Low power operation

TAGASIS CM - Mobile or Stationary data communications device with a touch screen interface and optional printer. Basically a small rugged computer system that can be customized to your application. Suitable for stationary or mobile applications.

TAGASIS CM shown here in a mobile application with optional printer and Satellite Communication.

ALDATA also offers asset monitoring website development

Web based monitoring systems, hosting and a wide variety of custom, semi-custom software development to fit your requirements
