

“Load Management” Right at the Source

Custody Manager is ALDATA's new Windows CE-based onboard computer that takes the collection of load data – including the GPS coordinates of the loading point – to the woods.

Custody Manager Features

General

- Upload and download information via satellite eliminating all manual intervention
- Add-on modules to handle motion sensing and tracking of mobile equipment

Load Entry

- Import contract and truck set-up data electronically
- Enter load data in the field at the wood source
- Validate load data against contract information
- Stamp load record with GPS coordinates

Load Slips

- Print bar-coded load slips with GPS coordinates improving scale-house processing

Custody Manager Benefits

- Prove “*Chain of Custody*” to your customers and use in your forest certification program
- Prevent potential fraud of wood by viewing reports of wood sent vs. received
- Cut down the time it takes to manage distribution and tracking of your ticket books
- Improve accuracy of load data by collecting & validating information at the source of the wood
- Increase scale-house efficiency by reducing scale load entry requirements
- Developed and supported by people who know the forest industry
